Evidencias de pruebas de seguridad

Actividad autónoma | 17 de octubre de 2026

Estudiante: James Christopher Tequen Oncoy
Docente: Benjamin David Reyna Barreto

Resultado: 28 casos aprobados, 62 peticiones o comprobaciones registradas y 10 pruebas Maven aprobadas.

Este anexo acompaña al informe de tres páginas. Cada captura muestra una ejecución real de Swagger. Los JWT visibles son temporales y pertenecen únicamente a las cuentas locales de clase; la colección exportada no guarda tokens.

El orden sigue los identificadores de la matriz. Cuando una respuesta es extensa, se conserva su escala y continúa en la página siguiente. Los códigos HTTP se muestran como evidencia técnica; los mensajes de negocio no contienen prefijos numéricos.

C-01 incluye la pestaña Red y el registro del preflight real desde localhost:4200. Las consultas Oracle de U-02 y B-05 se ejecutaron mediante JDBC; se conservan el SQL y su salida, para repetirlos en SQL Developer.

Archivos complementarios: matriz en docs/matriz-seguridad-s10.md; colección en postman/PharmaSoft-S10-Seguridad.json; capturas y registros en docs/evidencias-seguridad/.

Versionamiento: los commits tienen fechas reales del mismo día. La rama está publicada y el PR #1 está abierto hacia main. Queda pendiente el requisito de commits en días distintos.
